

tImNEXUS is a professional services company that provides bespoke web-based software solutions that help our clients improve productivity and service delivery.

A listed supplier on MOD FATS/3 (Framework Agreement for Technical Support) and an ISO 9001:2000 company, tImNEXUS works closely with our clients to devise a solution that really works for them, taking time to understand the unique challenges they face on a day-to-day basis, and developing a system that embraces and enhances their culture and best practice, yet improves access to information and knowledge share.

Our internal team consists of dedicated software developers, project managers and business analysts, many of whom are Microsoft and Prince2 certified and possess Masters degrees in a variety of subjects including Information Systems. They thrive on innovative problem solving, excellence, and harnessing new technologies to get the best for our customers.

DERIVE

Electronic Requirement Management

Managing the requirements for your key products is critical to ensuring a safe and capable fleet, yet you currently use a process that doesn't always provide the single view of information that you need to make effective decisions. The process fails to offer one standard format for supplying information and often results in a duplication of work and an incomplete picture of the core requirements.

This approach to managing requirement changes isn't efficient, but it is a common way of working. Teams struggle on because it is 'the way they have always done it,' and no one has suggested a viable alternative. Until now...

This is Derive

Derive is a web-enabled system, originally developed within the Typhoon project team, that enables people to manage their key product requirements quickly and effectively. The system is secure, simple, fast to use, and enables crucial requirements to progress without delay, whilst supporting better quality information and decision-making in the process.

Derive will...

- Supply a standard format for inputting initial information ensuring better quality data
- Present one single view of all product requirements - so project managers can easily view all outstanding problems and make informed decisions regarding prioritisation and funding
- Provide a complete audit trail for every requirement enabling teams to track the evidence, notes and communications that accompany each request
- Link requirement financials with budgets and deliverables, allowing users to track spend
- Ensure quality in the approval route by providing guidance and gates in the process

Sustainment Requirement Manager with the Ministry of Defence: "Moving to a web-enabled system is a big change for us, but the single view of requirements that it offers will help us make better and more timely decisions about what we spend and where we focus - both of which are vital in projects of this scale and importance. The system also links to our electronic business case management system, Approve, so we can build an even clearer picture of the commercial impact of our actions."
